Hi Diane,

Ask discussed over the phone, I've attached the photos of the original plans for Willow gardens that shows the 3:1 swale 3 ft wide and .5ft deep. This is not the case on the property. There is no swale. Essentially it's just one half of a swale either from it not being completed properly or the drain and the creek eroding away the land. Now the water pools at the back end of the property in front of where my shed once was. Please see the photos attached.
